

A real hit

Introducing the exciting new ABB family of Compact pilot devices.

The entire functionality is condensed into one single unit. So, no matter what type of application, it is a sure hit. In technical terms as well as in practical use and in cost-efficiency.

The Compact range offers all the basic functions you require: Pushbuttons. Selector switches. And pilot lights. Available in a spectre of different colours. They can easily be combined with the ABB range of Modular range of pilot devices. They all have the same high-quality pedigree and the same convenient front design.

For further information please visit www.abb.com/lowvoltage. It is a site where you meet the real pros.
