

Hole-in-one

Introducing the exciting new ABB family of Compact pilot devices.

No matter what type of application, our Compact range marks a giant improvement in both technical and practical use.

The entire functionality is condensed into one single unit. There are no components that have to be matched or assembled. One order number covers everything. Mounting is simplified. You just put the device in the slot and tighten it with the sleeve. Connect, and there you go. This "hole-in-one" concept really spells improved cost-efficiency.

For further information about our new family of Compact pilot devices - and our matching modular range - please visit www.abb.com/lowvoltage. It is a site where you meet the real pros.
