

KM8/16 Cable Joint
Universal, you can get to work right away

Super convenient

Always usable

Super convenient! With the KM8/16 Cable Joint you always have a usable box handy. Because this junction box from ABB is universal. You can use the KM8/16 Cable Joint to extend or expand a cable system when installing garden lighting.

Not level

The distinctive advantage of this junction box is that the foundation does not need to be levelled. In addition, you see through the transparent lid how much resin you can still pour in. So you have no problems with resin outside the junction box.

Easy to assemble

Place the junction box (flat) on the ground during assembly. Break out the ports. The roughened cable is assembled in the cable joint with the inserts. The insert seals off the cables. Connections can be made in- or outside the junction box. You are ensured of a watertight connection or branch underground because of the special resin with which the junction box is filled.

KM8/16 Cable Junction Box package

You can get to work right away! The junction box is delivered with resin, gloves, abrasive cloth, assembly instructions, terminals and three inserts.

The advantages of the KM8/16 Cable Junction Box:

- Can be used for a feedthrough, T- or Y-branch connection
- Suitable for cable thicknesses from 8 mm through 14.5 mm
- The special octagonal shape offers extra working space
- Connections can be made outside the box
- Inserts do not need to be made to measure
- During assembly the junction box can be placed flat on the ground
- Can be used on an uneven foundation
