

Cooling down without freezing up the process.

Introducing the redesigned low voltage water cooled motors from ABB. Taking full advantage of the water cooling benefits, they offer compact size and high power output per unit. Resulting in optimum cooling efficiency even at lower speeds, ideal for constant torque applications. Marine use, water and wastewater pumping, print machines and turbine generators, it all makes perfect sense with water cooled motors from ABB. To read more about our new range of water cooled motors from ABB and their business benefits, visit www.abb.com/motors&generators
