

# The Robot Training Centre, Milton Keynes

## RobotStudio Train-the-Trainer

With the launch of RobotStudio 5.11 we find a new Graphical user interface, and combined products in one package. RobotWare and Online, originally supplied on CD with every robot are now part of the RobotStudio DVD and still supplied with every robot.

On installation the user gets full 'Online and Offline' RobotStudio functionality for a 30 day evaluation, after that the user may still use the 'Online' features plus the 'Virtual Robot' and 'FlexPendant'. To continue with the benefits of offline programming, modelling and path generation from geometries you will require a purchased licence – for further information contact Sue Bond on 01908 350499

Simon and Richard, the ABB Trainers, attended the Train-the-Trainer event in Gothenburg during October. The course was well subscribed by fellow Instructors from Canada, Russia, Finland, Belgium, Sweden, Italy, Taiwan, Iran, and of course the UK.

Simon was quoted as saying “we were given the opportunity to practice and verify the ‘Certified User’ course material, recommendations and enhancements were fed-back to the development team who have updated the courseware and training manual. We were then introduced to the extended functionality of RobotStudio. VSTA macros written in C# were used to enhance stations with moving parts on conveyors. Pictures and videos were applied to surfaces for realistic representation. Arc Weld, Mechanical Cut and Machine Tending ‘Power Pack’ demonstrations from the development team were featured daily. If you are using or looking to use RobotStudio 5.11, this course will indeed prove beneficial in providing you with the latest from ABB, the market leader in offline robot programming.”

Please click on the link below to find a new RobotStudio online community including the User forum, online tutorials, videos and much more.
