JLS Automation

Your Competitive Edge in Packaging Automation

In business today, there are two simple questions that must be asked...

How can I meet the constantly changing demands of my customer better than my competitor?

How can this be accomplished while insuring the profitability of my company?

Your company's success will be determined by how well you are able to answer these questions. By involving JLS Automation, we become a collaborating Partner embracing these challenges with you. Our experiences with Food and Consumer Products companies across North America, and our unique combination of competencies provide you with a wealth of resources aimed at making your packaging operation more agile and effective in meeting these critical objectives.

Explore with us to learn more about our approach, our expertise, and the technologies we've developed to assist your organization to thrive in this dynamic environment.

JLS Automation

Our History and Investment in Packaging Automation

Founded in 1955 by Joseph L. Souser, JLS has a legacy of successful implementation of advanced motion control technology in many industrial applications requiring precision and reliability. Our introduction to the world of Packaging Automation dates back to 1993, when we were contracted by food processors to retrofit and upgrade their existing packaging machinery and systems.

JLS developed and installed our 1st robotic packaging system in 2002. Built upon our successes, we have become an innovative supplier of automated packaging systems for the Food, Pharmaceutical, and Personal Care Products industries. These customer-specific packaging systems are designed and built in our 42,000 sq/ft purpose-built facility in York, PA.

Our customers value JLS Automation for more than our products. Our strengths are derived from our “real world” experience and our heritage in automation. With JLS, you are assured....

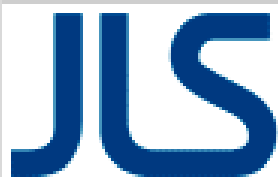

- A **Customer-Centric**, Collaborative Approach to System Development
- Design for **Agility** Philosophy
- A **Lower Investment** Solution, Utilizing Existing Equipment
- Risk Mitigation with **Phase Zero** Project Management Process
- Extremely **Reliable** Performance Assured with ABB Robotic Based Systems
