2009 Price Increase on Alamo Products

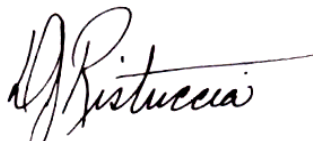

ABB announces the following price increases for products manufactured at its facility located in Alamo, Tennessee, USA.

- Bushings for power transformers: average prices will increase approximately 8%. Increases for very specialized products in this category could be higher.
- Components for power transformers (control systems, tap changers, N2 gas systems, bushing potential device, etc): average prices will increase approximately 10% with prices for specialized products or design-to-suit products increasing beyond this range.
- Components for distribution transformers: average prices will increase approximately 8%. Increases on limited use, specialized products will exceed this range.

These price increase are effective on this date and apply to all product shipped in 2009. Shipments in 2008 are not effected.

ABB finds these price increases necessary to combat the continuous price increases in sub components and raw materials used in the manufacture of these products. All existing agreements with customers will be honored for the duration of the agreement.

For additional details, please contact your ABB representative.
