New Managing Director for ABB Power Technology Products, Components

Lars Nilsson, since a year ago responsible for ABB's global business of insulation material, bushings, tap-changers and mechanical components, has now also been appointed new Managing Director for ABB Power Technology Products, Components, in Ludvika, Sweden.

Lars Nilsson succeeds Peder Barmé who has been appointed Managing Director of ABB Power Technology Products, High Voltage Products, Sweden.

The appointments are effective from December 1, 2002.

A few words from the Managing Director...

The year 2002 will soon be ending. I would like to thank all of our customers, new and old ones, for choosing ABB Components as your supplier of bushings and tap-changers. Our goal is to be your best alternative when you compare price, quality, on-time delivery and service, and it seems that we have been successful. Our order entries continue to increase year-by-year, and this year is the best ever in the company's history. The high order intake has given us longer delivery times, but this has been solved in most cases by increasing the production capacity. I thank you for your understanding. Please remember to use our reservation system which will give us a better possibility to meet your requested delivery time.

We have intensified our R&D activities which means that new advanced products with higher customer value will be available in the near future. More information about this will be given in coming Newsletters.

I am looking forward to working together with you all and I'd like to take this opportunity to wish you all a Very Merry Christmas and a Happy New Year!

Lars Nilsson
