## On-load tap-changers delivered for retrofit

During 2001 we received the first order for retrofit on-load tap-changers for Russian market to a Russian utility. The installation was made during refurbishing of two transformers in customer's repair workshop. (Transformer data: 63 MVA, 115/10 kV +/-9x1.78%)

The tap-changers are of our standard type UBBDN 350/400 with motor-drive BUL and these are for replacement of tap-changers of non-ABB make. The adaptation of cable conductors, transformer tank etc. to UBB dimensions was made by the customer. A supervisor from Components was present during the installation for consultations.

The installation was successfully made in December 2001. For information about retrofit on-load tap-changers, please contact Components' After Sales Support .

## About deliveries

Last year, Components again set a new all time high in tap-changer deliveries. The market success hit us faster than we had planned, and during a period we had difficulties to confirm deliveries at the time our customers requested. In order to meet the market needs, we have now increased the production capacity in our own workshops and secured the larger volumes of material supplies. With the new staff fully trained and the new production capacity stabilized, we can offer the following delivery times:

UB .....	5 weeks
UCG .....	6 weeks
UCL .....	8 weeks
UCC .....	12 weeks
UZ .....	5 weeks

The delivery time information is updated every week. You can find it at [www.abb.com](http://www.abb.com). (Under Select Product Guide, select Transformers; then click on Components in the list.)
