

# An Evolutionary idea.

## Extend your system with zero downtime

*"We're known for our world-class product (electrolytic manganese dioxide for alkaline batteries.)*

*Quality is our number one concern.*

*Our continuous process plant must run with virtually no downtime to ensure the high quality of our product, as well as manage our costs. Our evolution to System 800xA is being executed with zero downtime, while providing us with the added functionality we need to be competitive."*

— Randy Wimberly  
Information Systems Manager, Erachem Comilog, Inc.  
New Johnsonville, Tennessee

ABB's incremental evolution path allows you to add new functionality to your existing control system—at your own pace—at minimum risk to your production. With a stepwise evolution plan executed on your schedule, we help keep your plant up and running to successfully meet your production needs today, while adding the System 800xA functions you need to be competitive tomorrow.

Extend your existing ABB system without jeopardizing your current production. **For details on how system evolution can work for you, call ABB Customer Support at 1-800-HELP-365, option 2 Control Systems, then option 5.**
