

# MPS Insight

## Product summary

MPS Insight is a tracking tool providing an online visualization of the production process which can be viewed via internet or intranet. Authorized managers can therefore have access to live data about their productions from anywhere in the world. The scope of the tracking can be extended modularly to cover page make-up, platemaking, reel handling, the press and the mailroom, at one or more sites.

---

### Features

Browser-based system: data available anywhere to authorized users  
Tracking of progress within individual subprocesses and across the whole production process  
Modular system with a selection of views  
Single database for the storage of all process values. Data available for other applications.

---

### The functions

The range of views is being extended continuously. The following views are available today:

#### Prepress

- Product view: showing the structure of the product, page-layout (including partial pages) and the planned content
- Plates: current state of plate production
- Plate events: graphical tracking of plate counts with event listing

#### Press

- Paper: newsprint imposition
- Ink: ink imposition, with highlighting of changes between jobs
- Preset queue.
- Active and planned productions: with comparison of the planning and reality
- Press events: graphical tracking of copy counts and listing of major events on the press

#### Postpress

- Production routes: tracking the mailroom production for each delivery route and the associated drops

#### Overall

- Production events: events and counters of multiple subprocesses

## Example Views
