

Automation Sentinel

Protecting your past, present and future automation investment

ABB's Automation Sentinel software management program extends support for and the value of your existing ABB control software investment, while it establishes an affordable path forward to the next generation of System 800xA functionality.

It provides the best overall ROI for your past, present and future ABB software investments.

Evolution and investment protection have always been cornerstones of our development programs – this is why ABB has set the industry Gold Standard for lifecycle support for control systems. We have a long and established history of developing new products in a way that allows you to adopt them at your own pace, with minimum risk to your current operations and with maximum investment protection. We have the twenty-five year track record to prove it.

System 800xA Extended Automation is the next generation offering for all ABB control systems; our evolution path allows you to incrementally add selected 800xA functionality to expand your existing system. Automation Sentinel provides the most cost-effective path to get your control system into System 800xA's enriched operating and engineering environment for expanded visibility into and tighter control of your production processes, and sets the stage to add new features and functions later on.

Automation Sentinel also helps you get the very most out of your current ABB system software investment. All program subscribers receive

extended technical support and Solutions Bank access for existing software, so that the benefits and services begin even before any upgrades are planned. You can then upgrade on your own timetable.

When subscribers do upgrade, Automation Sentinel provides the functional equivalent System 800xA software application at **no** additional licensing cost—making Automation Sentinel the most affordable way to evolve your current software to and enjoy the productivity benefits of the latest System 800xA operating environment.

Find out how Automation Sentinel will help maximize the ROI on your ABB control software investment...call your ABB Sales/Service Representative today!

Automation Sentinel

The most affordable evolution path to System 800xA

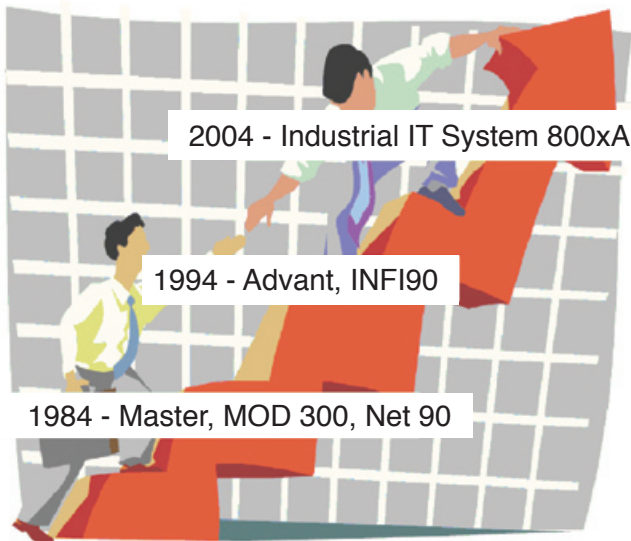

ABB is committed to helping you reach your productivity and profitability goals. Your existing ABB control system investment has been instrumental in helping you to reach these goals over the years; we offer a number of system evolution programs and services that help you get the most value and performance out of your ABB control systems, and at the same time add the functionality you need to grow your business and compete globally.

The Automation Sentinel Program is the latest step in our ongoing commitment to help you get the most value out of your current ABB control system investment; it protects your past, present, as well as your future automation investments. This innovative software management program helps you keep your

automation software current and provides you with an incremental and cost-effective evolution path to the latest System 800xA software.

Automation Sentinel

Simple, safe and secure program puts YOU in control

- **Manage your lifecycle costs:** Plan and budget your evolution path forward with predictable costs—no surprises!
- **Get the most out of what you already have:** Extended technical phone support and services
- **Works with your schedule:** Upgrade your software on your timetable
- **Provides dependable support:** Planned, long-term product support ensures that your control system will be ready to move forward along with your business
- **The most affordable evolution path to the enriched System 800xA operating environment**

Complementing our portfolio of evolution planning products and services, Automation Sentinel is another reason why ABB has the best track record in the business for control system investment protection.
